PROFESSIONAL SUMMARY

Full Stack Developer specialising in Laravel and Next.js, and founder and tech lead of HealthyLife AI, an Arabic-first SaaS platform for clinical nutrition specialists now running in production. Experienced across backend architecture, relational database design, REST APIs, interactive UIs and LLM integration, including multi-tenant data isolation, role-based access control, queued jobs, automated testing and defensive AI parsing. Anthropic-certified in building with the Claude API.

TECHNICAL SKILLS

Backend: Laravel, PHP, Livewire, Filament, REST APIs, Eloquent, Java & Spring Boot (event-driven microservices), MVC, OOP, SOLID, Clean Architecture

Frontend: Next.js, React.js, TypeScript, JavaScript, Tailwind CSS, Blade, HTML5, CSS3

AI: Claude API, OpenAI API, Prompt Engineering, Structured/JSON Output, Defensive Parsing & Validation, AI-Assisted Development

Data & Tooling: MySQL, PostgreSQL, MongoDB, SQLite, RabbitMQ, Git & GitHub, Docker, PHPUnit, Postman, Stripe API, Render / Railway / Vercel

EXPERIENCE & LEADERSHIP

Founder & Tech Lead — HealthyLife AI (Taqat · Code Map 3 Program) **Jul 2026 – Present**

- Founded and lead HealthyLife AI, an Arabic-first B2B2C SaaS platform that helps clinical nutrition specialists manage patients, design meal plans from a local food library and follow adherence between visits; live in production.
- Designed the multi-tenant architecture and MySQL schema, with a global scope isolating all patient data per nutritionist and Spatie role-based permissions across admin, nutritionist and patient roles.
- Built the Laravel REST API that serves both the Next.js specialist dashboard and the Flutter patient app, plus an AI layer combining rule-based adherence alerts with LLM-generated weekly clinical summaries; covered by 200+ automated tests.
- Lead a 3-developer team (backend, web and Flutter) working with marketing and design members: sprint planning, task assignment, code review, GitHub release workflow and production deployment.
- Validated the B2B model through interviews with practicing nutritionists before building, and authored the product documentation (SRS, PRD, user stories, milestones).

Laravel Developer (Trainee) — Webura Intensive Training, Gaza **Jun 2024 – Mar 2025**

- Completed an intensive, project-based Laravel program; built a full e-commerce platform end to end (catalog, cart, checkout, order tracking) with Stripe payments and an AdminLTE + Livewire admin dashboard.

KEY PROJECTS

Real Estate Management System — Multi-Tenant SaaS Live · Code

Laravel · Filament · Livewire · Next.js · React.js · MySQL · REST API · Spatie Permission

- Co-developed in a 2-person team a platform covering property, unit, lease, payment, expense and maintenance workflows.
- Implemented tenant isolation with a custom HasCompany trait and CompanyScope that scopes every query by company_id, and granular RBAC with Spatie Permission and Filament Shield across five roles.
- Exposed REST APIs for the Next.js frontend, moved long-running work to queued jobs, events and scheduled notifications, and covered tenant isolation with PHPUnit tests.

Smart Expense Management System Live · Code

Laravel · Filament · Livewire · MySQL · OpenAI API

- Built and deployed a personal-finance platform for expenses, budgets, income, analytics, alerts and dashboards.
- Designed an AiExpenseAdvisor service that sends aggregated, user-scoped financial context to the OpenAI API, constrained by prompt-enforced JSON contracts, type validation, defensive parsing and graceful handling of rate limits and API failures.
- Added automated tests using OpenAI fakes to verify AI responses and external-API failure paths.

Unified University Platform — Graduation Project Live · Code

Laravel · Livewire · Filament · PostgreSQL · Sanctum · Spatie Permission

- Designed the relational database and built the Filament admin portal for users, roles, colleges, majors, courses, tickets, announcements and settings.
- Implemented ticket routing with chat-style replies, notifications, smart admission calculations, instant search and a maker-checker approval flow; improved data access with eager loading and caching.

Additional work: Dental Clinic Management System (Laravel backend with a separate Next.js frontend for patients, appointments, billing and inventory) · Expense Management Microservices (Java / Spring Boot, event-driven).

EDUCATION, CERTIFICATIONS & LANGUAGES

B.Sc. in Software Development — Islamic University of Gaza · Graduated June 2026 · Grade: Very Good · English-taught program

Anthropic Education (2026): Building with the Claude API · AI Fluency: Framework & Foundations · Claude Code 101

Languages: Arabic (native) · English (professional working proficiency)
